Leading Government Provider

Federal Prison Industries (FPI) is a leading supplier of Fleet Management, Fleet Upfitting and Refurbishing and Vehicular Components Remanufacturing Services to the United States Government.

FPI offers a complete range of retrofitting and upfitting of new vehicles and remanufacturing of tactical wheel vehicles and custom components. Our nationwide network of service, drop-off and distribution centers offer a wide array of fleet maintenance and management services.

Our technical specialists can rebuild or remanufacture your vehicle components, engines, electrical or other equipment, and return them to you in like-new condition at a fraction of the cost.

As a leading government provider of Fleet Management and Vehicular Component Remanufacturing services, we have the technology, knowledge and service-orientation to meet your specific fleet requirements.

We have more than half-a-million square feet of factory and warehouse space, and 2,000 highly trained mechanics and technicians with a wide range of skills. FPI facilities are located throughout the nation and most are ISO 9001:2000 Certified, with ASE certified mechanics. All of our work is fully guaranteed and warranted.

*“VMIS” can help your organization
achieve measurable reductions in
maintenance expenditures, improve
productivity and increase efficiency.*

Total Fleet Management Solution

- Versatile and Scalable
- Streamline Operations
- Ease of Administration
- Improve Vehicle Utilization
- Easy to Use Management Reporting
- Powerful Query Capabilities
- State-of-the-Art Data Validation
- Secure Platform

Fleet Management Services, built on a strong partnership with FPI and Maximus, is a revolutionary software application that offers you a feature-rich, scalable solution to maintain your Fleet Operations.

“VMIS” Vehicular Management Information System, combines comprehensive functionality with fully Web-architected technology, providing real-time access to information, seamless integration in your organization’s legacy applications and true database integrity.

Custom configured to meet your specific operational needs, “VMIS” can help your organization achieve measurable reductions in maintenance expenditures, improve productivity and increase efficiency with:

Asset Management:

To track critical information on vehicle performance and maintenance histories, equipment availability, acquisition cost and disposal value as well as parts inventory.

Warranty Administrative and Claims Processing:

Flexible and comprehensive reporting tools (including FAST reporting) that can be viewed on-line, distributed through e-mail or exported into Microsoft Word or Excel.

Fully Integrated Fuel Management System:

Track fuel orders, receipts and inventories. The VMIS (Vehicular Management Information System) application helps your Fleet stay within “Greening of the Fleet” legislative requirements.

Other Features Include:

**Inventory and
Purchasing Control**

Billing and Accounting

Life Cycle

Cost Tracking Analysis

**Productivity Replacement
and Profitability Analysis**

FPI has a successful record of meeting customers' needs for specialized, timely and cost-effective services under demanding circumstances.

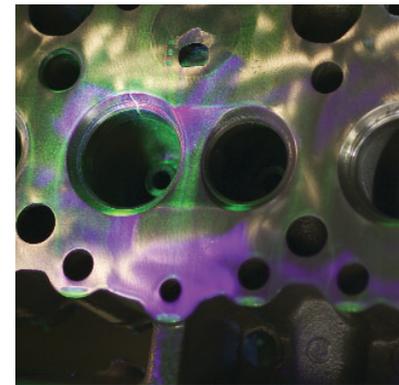

Fleet Vehicle and Vehicular Component Remanufacturing Services

- Repair and rebuild a wide array of components
- Engine remanufacturing, all sizes and variants
- In-line and cross-drive transmission rebuilt capacity
- Vehicle electrical and sub-assemblies
- Dedicated facilities with over half-a-million square feet of factory and warehouse space
- 2,000 highly-trained mechanics and technicians
- Extended capacity and surge capability

FPI remanufactures a variety of vehicular tactical and non-tactical components including generators, starters, alternators, regulators and transmissions to like-new condition at substantial savings. Most of the items that we remanufacture have been classified as “non-repairable” and are headed for a Defense Reutilization Management Office (DRMO) where they are sold as scrap. By reclaiming and remanufacturing these parts, we are able to provide quality vehicular components to our customers at substantial savings.

Our departmental and agency customer list is wide ranging. Our high-quality, customized services have earned the trust of the Department of Defense. We have developed a responsive, global vehicular component supply system that helps keep the Marine Corps mission-ready at a moment’s notice and FPI remanufactured generator sets are in operation on air bases and rebuilt forklifts are loading weapons and equipment into U.S. Navy ships.

Our customer network encompasses the Armed Forces, Department of Homeland Security, Federal Emergency Management Agency, the U.S. Department of Agriculture—U.S. Forestry Service, and many law enforcement, and federally funded state and local agencies. We also serve private industry customers, particularly in the areas of heavy equipment and fleet servicing and management.

*FPI services can help public and
private-sector customers...
refurbish in-service vehicles
rather than purchasing new ones.*

Vehicle Retrofitting and Upfitting Services

- Research and Design Services
- Custom Fabrication
- Vehicle Procurement
- Leased Vehicle Upfitting and De-retrofitting
- De-retrofitting Vehicles
- Refurbishing Vehicle Components
- Large Vehicle Maintenance
- Vehicle Transport

Tactical and non-tactical vehicles as well as commercial vehicles, such as light and heavy-duty trucks, SUVs, vans, forklift trucks, and Humvees, including prototype SORV (Severe Off Road Vehicle) can be customized and retrofitted to meet your needs.

Because we serve many law enforcement agencies, FPI has established custom production lines to convert sedans, pickup trucks, buses and SUVs into fully equipped law enforcement vehicles. These services include installation of security partitions, strobe lights, siren heads, first aid kits, and gun racks. We also have complete K-9 vehicle packages, and retrofit buses and vans for secure inmate/detainee transport. Upfitted and retrofitted vehicles receive customized painting, striping/markings, and window tinting in our state-of-the-art painting and coating facilities.

We use only OEM-specified parts and manage all upgrade work with ASE certified mechanics.

In addition to fleet upfitting services, FPI refurbishes and upgrades vehicles to meet safety codes and operational efficiencies for Department of Defense and government and law enforcement agencies. We have high-tech refurbishing equipment to handle projects involving vehicle exteriors (hoods, cargo carriers, etc) and interiors (engines, chassis, transmissions, etc).

In today's challenging economic environment, FPI services can help public and private sector customers meet budgetary requirements by providing cost-effective options for refurbishing in-service vehicles rather than purchasing new ones.

The Right Tools and The Right Training for Every Job

FPI operates facilities throughout the country, comprising more than half-a-million square feet of factory and warehouse space. The size of our operations, combined with 2,000 highly trained mechanics and technicians means that no job is too big or too small.

Bastrop, La Tuna and Three Rivers, Texas:

Specialize in retrofitting and upfitting a wide variety of vehicles—from sedans, SUVs and Jeeps to light and heavy-duty trucks—for law enforcement agencies. Three Rivers also works in partnership with Maximus to provide leading edge fleet management solutions to our customers needs.

Beaumont, Texas:

Remanufactures engines ranging from four-cylinder to large V-12 motors. A multi-million dollar contract with an on-site parts vendor plus an inventory of 10,000 different parts assures fast, efficient service.

Estill, South Carolina:

Remanufactures a wide variety of tactical and non-tactical components, such as generators, starters, alternators and rebuilds transmissions to like-new condition at a fraction of replacement cost.

Terre Haute, Indiana:

Overhauls and upfits buses and trucks, converting vehicles for corrections and inmate transport or making handicap conversions that meet all ADA requirements.

Petersburg, Virginia:

This facility is used in conjunction with a partnership alliance.

Victorville, California, Herlong, California, Bennettsville, South Carolina and Gilmer County, West Virginia:

Rebuilds military vehicles and vehicle components for the DOD and Federal Agencies using the most advanced equipment on the market. Factory and warehouse logistics are integrated with a Materials Requirement Planning (MRP) system.

Customized Service Solutions for Achieving Your Fleet Goal

FPI is structured to help you meet your Fleet Management, Vehicle Upfitting and Vehicular Components Remanufacturing goals by providing a level of service and attention to detail not found elsewhere. We customize service solutions to your needs, returning your equipment to operation faster and at less cost than most providers.

We have the capacity, skills and state-of-the art equipment to handle any job, large or small. Our Fortune 500-caliber logistics and supply chain management systems assure on-time delivery.

We also provide "surge" capabilities to meet rapid increases in demand. Your work will be completed and quality-tested in leading-edge facilities. The size and specialization of our plants and warehouses provides us with the special skills, equipment and economies of scale to meet your Fleet needs. FPI delivers fast, reliable, high-quality service more cost-effectively than other providers, including expeditious shipping to and from our facilities.

All parts used in remanufacturing and servicing your Fleet and Vehicular Components meet OEM (Original Equipment Manufacturer) specifications. We do everything possible to meet your requirements and stand behind our work with full guarantees and warranties.

FPI can offer you the convenience of expedited purchase, cutting out much of the time and red tape involved in commercial contracting.

By working with us, you also gain SBA credits due to our high commitment to small and small disadvantaged businesses. Our dedication to small business benefits you and your organization's small business goals.

Through our partnership with Maximus, a global leader of fleet management solutions, we also offer the latest Internet-based software and systems for managing and maintaining fleet operations.
